ScanGate<sup>®</sup>Sensors

Accellaration, Temperature, Light, Magnetometer, Humidity

#### Worldwide unique ID, R/W memory, more than just a RFID transponder

# ScanGate<sup>®</sup> Sensor Transponders

The Internet of Things in a flash!

ScanGate® Sensors are ready-to-use wireless sensor nodes in the size of a key fob, combining a flash- programmable processor, a 2.4 GHz ISM-band ultra-low-drain radio, four sensors and power.

ScanGate® Sensor is the first low-cost sensor platform in the world designed for the Internet of Things. Until today sensor modules have come in all shapes and sizes for different specific applications. Being made in limited quantities makes them expensive, while custom programming for every application takes time and adds risk. In contrast ScanGate®Sensors can be used for countless applications - starting with indoor localisation, logistics, data logging and smart phone accessories - the only limit is your imagination.

ScanGate®Sensors are smaller, cheaper, faster to deploy and longer lasting because they are standardised, certified, and use very low power. By simply flashing each ScanGate®Sensor (using the easy-to-use tools provided) you lock in a high-level app to bring your customers the benefit of the Internet of Things in record time.

#### Applications, how it works and what it does

ScanGate®Sensors can be deployed as miniature beacons in buildings, parking garages, shopping malls, and airports without significant installation effort. ScanGate<sup>®</sup>Sensors allow highly accurate indoor positioning on a Smartphone or on a paired ScanGate<sup>®</sup>Sensors location logger device. The installation of ScanGate®Sensors eliminates the need for costly Wifi infrastructure, power cabling, and site-specific fingerprinting. Each beacon consumes much less energy than Wifi.

Temperature, Humidity and Shock Sensors for Logistics

Thousands of autonomous measurement nodes can be used in food logistics and be installed in transport containers allowing the microclimate of the packages to be tracked and logged. Can be used for quality assurance.

#### Asset Tracking and Tracing

Assets and inventory are a main part of the property of a company. Sustainable and reliable marking with ScanGate®Sensors with a worldwide unique ID enables tracking and tracing and easy continuous inventory.

- If items are moved, you get a signal and related data are recorded
- If items leave a certain area, signal and data are recorded
- Fast inventory: Move around and item IDs are recorded

ScanGate®Sensors enable you to create the next killer application for smart phones. ScanGate®Sensors bring an endless variety of applications to the smart phone with a single extremely affordable device. Let your imagination run wild!

2nd generation will include maintenance-free autonomous operation

#### Vehicle Identification and Location

ScanGate®Sensors provide

- Fully automatic monitoring of vehicles in garages and parking lots.
- Access to private, business and public premises
- Control of refuelling and collect refuelling data automatically
- That only vehicles with registered ScanGate®Sensors can be operated.
- Proper accounting per vehicle

#### Logistics

Mobile items are difficult to manage. ScanGate®Sensors help to optimise transport time and avoid losses

- All parcels or parcel containers in a truck are monitored permanently- temperature, shock, humidity, light

- Sensitive and hazardous goods are monitored during transport

- Commissioning of parts (e.g. for a construction site) is easy and without errors because of fully automatically data collection

**Connecting People** ScanGate<sup>®</sup>Sensors do more than just identification.

- Security in tunnels and mines, access control and security control in public areas, government buildings, schools

Network and "In Door" RTLS provides a complete picture of people and their movement

- Interactive communication at events and leisure areas
- Fast ticketing at large giant events

#### Features and Benefits, Technical Data

#### Available sensors

- o o Integrated acceleration and shock sensor detects defined acceleration limit, movement
- o o Integrated temperature sensor at programmable measurement intervals
- o o Integrated light sensor (open cover detector)
- o o Integrated magnetometer
- o Humidity sensor, Barometric sensor
- Highly flexible, 2.4GHz multi-protocol radio
- ☑ Long range up to 30m depending on environment or line of sight
- Fully qualified Bluetooth<sup>®</sup> v4.0 low energy with integrated Radio, Link Layer, Host stack, native service and profiles, optimized solution for Peripheral (slave) role operation
- Connection to smart phones, PDA's, PCs, tablets, mobile Computers
- ☑ Certifications CE, EN 300 328, FCC pending
- Ultra-low-power

0

- o o Powered by coin cell battery or 2 AAA, or 1 industrial AA:
  - Best-in-class power consumption enabling months to years of battery lifetime
- o o Autonomously powered by energy harvesting (2nd generation)
- ☑ Very low-cost device
- Application specific transponders, tags and keyfobs
- ☑ Compact and ergo metric design, IP54 or IP64 or P68 available
- Made for outside operations, industrial areas, rough environment, on vehicles, ...
- LED indicators for Power, Signal, Communication Control, optional Beeper
- ☑ Thread-safe and run-time protected
- ☑ 3 data rates (2Mbs/1Mbs/250kBs)
- +4dBm to -20dBm output power
- Advertising intervals from 250ms to 30sec
- Additional GPIO ports available for optional sensors and for Interfacing
- Configurable I/O mapping for analog and digital I/O
- ATEX compliance on request

#### Bringing the Internet of Things to a Data Highway near you

#### Applications **Industrial Sensor Applications** Home and Building Security and Automation o Temperature sensor networks o Open/close detector o Acceleration and vibration detection o Glass break sensor for doors and windows o Condition-based maintenance o Light, temperature and occupancy sensors o Light sensing o Keyless entry o Access activity logging, people finding o Magnet detection, magnetic pulse counting, field sensing o Humidity measurement o Pet tags and feeders **Data Loggers** Indoor Localisation o Temperature loggers, read out by smartphone or gateway o Asset tracking o Acceleration loggers, read out by smartphone or gateway o Retail space tracking o Vehicle tracking in parking garages o Indoor smartphone tracking **Consumer Products/ Smartphone Accessories Museums and Collections** o Proximity applications o Libraries, art collections, treasuries o Find me, alarm o Light, shock, movement sensors for status detection o Temperature sensors (always connected or data logging) o Animation feedback in the area of the arts
